

EXPLORE

A secure, web-based query tool.

Whether in the hospital or almost anywhere else, users can immediately access the data they need when a patient or colleague requires guidance.

What Explore has to offer

The information users can access through Explore helps routine office visits run more smoothly, supports critical transfer of information at transitions of care, and allows better informed treatment decisions in an emergency.

- **Lab Results:** Results from 19 hospitals and most independent labs in the region.
- **Radiology Reports & Images:** Radiology reports, source X-rays, CT scans, MRIs and other radiology images are available at full diagnostic quality. Use a patient-specific HIE Worklist to review prior studies. A built-in viewing tool lets physicians analyze and compare images from any secure computer.
- **Clinical Documents:** Discharge summaries, cardiology reports, operative notes, and history & physicals allow providers to better monitor patient care and help avoid unnecessary readmission.
- **Encounters:** Regional hospitals send admission and discharge notification automatically to the RHIO.
- **CCDs/Care Summaries (Coming Soon):** Medical practices, urgent care providers, long-term care facilities and home care agencies will begin to share care summaries with the Explore portal by the end of 2015. Care summaries will include medication history, diagnoses and allergies.
- **EMS Information (Coming Soon):** Electronic pre-hospital care documents are posted in Explore. This information includes emergency care provided by EMS, even if it doesn't result in a patient transport.
- **Supporting Services for Seniors (Coming Soon):** Medication monitoring information, psychological/social issues, emergency contacts, services currently being received such as meal supplements or equipment deliveries, and more.
- **Supporting Services for Perinatal (Coming Soon):** Patients' home support statuses, medication-monitoring information, psychological/social issues, emergency contacts and social services currently being received.

Explore is a secure, web-based query tool—so whether in the hospital or almost anywhere else, users can immediately access the data they need when a patient or colleague requires guidance.

What is Explore?

Rochester RHIO's Explore is a query portal that includes clinical data for over 1.4 million patients—accurate, up-to-date and always available.

The RHIO's secure electronic health information exchange is a valuable resource to more than 5,600 authorized medical providers and their staffs across 13 counties in New York's Finger Lakes Region.

Explore Top 5

Based on surveys and utilization patterns among thousands of area users, the five most popular features are:

1. Viewing reports, especially ED visit summaries
2. Accessing radiology images
3. Checking if a patient has been discharged
4. Preparing for a patient visit by reviewing care by other providers
5. Confirming patient demographic information

One window to patient information—always available, wherever needed.

Explore supports collaboration with other physicians. Increasingly, high-quality medical care demands the sharing of information across multiple physicians and institutions. The push for collaboration is evident in the federal guidelines for meaningful use, which link Affordable Care Act payment incentives to achieving higher levels of health information exchange. Explore delivers all these benefits at no cost to users. Our staff can provide support and training in incorporating the RHIO's valuable tools and services into daily workflow.

EXPLORE provides a single portal for obtaining patient information no matter where you are.

The patient consent process is easy—and 97% of patients asked say yes!

Patients must provide their consent for each practice or health system to access their information electronically through Explore. Rochester RHIO makes the process easy for providers and patients, with an opt-in consent rate consistently above 97%. Through Rochester RHIO training programs and our website, Rochester RHIO delivers all of the tools participating providers need to make patient consent a success. We provide patients all the information they need to make their consent decision, including direct access to RHIO representatives through a customer service call center and RochesterRHIO.org.
